

Alam Alonzo

ARCHITECT PORTFOLIO

I have over a decade of experience as an architect, most of my professional career at Pulso Arquitectura, a Caribbean firm where I joined just before graduation and witnessed its growth from early projects to maturity.

I have contributed to design, presentation, planning, management, and project direction across all phases of my work. More than 15 completed projects spanning residential, commercial, healthcare, and institutional typologies, with technical responsibility for BIM modeling, construction documentation, MEP coordination, and site supervision.

Bolero 21, an 11-story residential building where I led interior design for apartments and lobby spaces, won the Dominican Republic Architecture Biennial 2025.

Villa 15 de Mayo

Jarabacoa, Dominican Republic
2022

125 m²
AREA

USD 240,00.00
BUDGET

14 months
DURATION

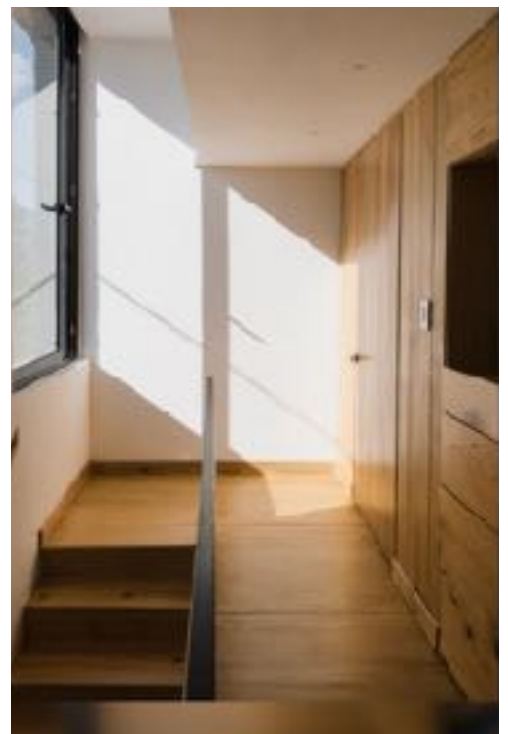

Completed
STATUS

Following client approval, I led the preparation of construction documents, coordinating with structural engineers and resolving key technical details: MEP routing, HVAC system placement, and service area definition to preserve the volumetric clarity of the design.

I assembled and directed the complete site team; master builder, resident engineer, specialists in electrical, plumbing, light-frame structure, and carpentry in a remote mountain location with limited access to materials and qualified labor. I relocated to Jarabacoa for 14 months of direct supervision, managing budget, material takeoffs, payments, logistics, and continuous client communication. The project was delivered on budget and became one of the firm's most referenced works.

SKILLS

REVIT BIM · MEP COORDINATION · SITE SUPERVISION · BUDGET MANAGEMENT · TEAM LEADERSHIP · ON-SITE DETAIL RESOLUTION

EXTERIOR LIVING

EXTERIOR LIVING
Construction process: on-site carpentry workshop

Typical Bedroom 2nd Level

COMMENT:

A project that represented one of my greatest professional leaps, taking on integral coordination across all phases from design through site supervision, responding to a client with elevated technical and aesthetic demands.

STATUS

Key architect from the conceptual phase, leading volumetric and façade exploration through dozens of iterations in 3ds Max with V-Ray. I designed the main lobby and lobbies at each level comprehensively, and participated in the development of duplex typologies alongside the principal architect.

I coordinated MEP routing with structural and mechanical engineers, defining optimal installation paths for the building. I prepared documentation for permit processing with MOPC and managed direct communication with door, carpentry, and kitchen suppliers.

I supervised alongside the principal architect the installation of the ventilated façade with metal structure and color panels for approximately 10 months. The project won the Contemporary Design category at the Dominican Republic Architecture Biennial and is currently an iconic project for the firm.

SKILLS

ARCHITECTURAL DESIGN · 3D VISUALIZATION · FAÇADE SUPERVISION · MEP COORDINATION · PERMIT PROCESSING · 3DS MAX · V-RAY · PHOTOSHOP

Typical Lobby Apartments: 2, 4, 6, 8, and 10.

Apartment Entry: 2, 4, 6, 8, and 10.

Main Lobby First Level

COMMENT:

This project was developed during the COVID-19 period, which presented significant management challenges. Remote coordination with clients, collaborators, and technical teams demanded clear and constant communication, as well as the ability to lead complex conversations in a context of high uncertainty.

Centro Médico MMB

Santo Domingo, Dominican Republic

1,500 m ² AREA	USD 2,000,000+ BUDGET	- DURATION	Under Construction STATUS
------------------------------	--------------------------	---------------	------------------------------

Integral project management from finishing phase, supervising the resident engineer and directly contracting specialized technicians: electrical installations, air conditioning, carpentry and aluminum work. Simultaneous coordination of 8+ specialties: structural, electrical, A/C, plumbing, aluminum and wood carpentry, metalwork, and maintenance. Resolving technical conflicts to ensure continuity in an accelerated final phase environment.

Construction budget management exceeding US\$2M: quotes, supplier selection, direct negotiation with suppliers, cost control, and delivery schedules. Direct purchasing of materials for line items under my supervision.

Project representation with the client and inspectors during site visits, with progress reports and technical documentation delivered to the principal architect. One continuous year on-site to date.

SKILLS AND SOFT

PROJECT MANAGEMENT · SITE SUPERVISION · COST CONTROL · MEP COORDINATION · TECHNICAL COORDINATION · CONTRACTING · NEGOTIATION · PROCUREMENT · TECHNICAL PROBLEM-SOLVING · LEADERSHIP · STAKEHOLDER MANAGEMENT

Façade

Façade and parking space.

Façade and parking space.

COMMENT:

Project in continuous execution for over one year, received in structural phase (grey shell). The main challenge has been managing progress in a context of variable financial availability, optimizing planning, prioritizing line items, and ensuring work continuity.

101 Lecciones de un estudio de Arquitectura

STATUS

For a decade I worked in an architecture studio in the Caribbean, growing alongside an office that started from zero. That experience allowed me to understand architecture beyond design: as a process full of decisions, errors, and lessons built day by day.

Drawing from notes accumulated over time, I compiled 101 brief lessons that reflect universal dilemmas of the profession. This is not a technical manual, but an invitation to reflect on architectural practice as a constant exercise of adaptation that, beyond transforming spaces, also shapes us as architects.

STATUS

Conception, development, and commercialization of a line of 16 miniature sculptures of architectural and urban icons of the Dominican Republic; from the Cathedral of America and the Alcázar of Colón in the Colonial Zone, to the Basilica of Higüey, the Columbus Lighthouse, and the National Palace, among others.

Survey of each icon through aerial photogrammetry with DJI Mini 2 (3 flights of 15 minutes per piece), processed in OpenDroneMap. Complete cleaning and remodeling of each building in Blender, adjusting scale and level of detail for 3D printing and concrete casting. Development of proprietary molding and casting technique, applying fine arts knowledge to achieve finishing quality at reduced scale.

Integral project management: brand design, marketing, advertising, website creation, and direct sales to the public with approximately 60 units sold.

SKILLS

PHOTOGRAMMETRY · BLENDER · 3D PRINTING · CONCRETE CASTING · BRAND DESIGN · MARKETING · DJI MINI 2 · OPENDRONEMAP

Catedral Primada de América

Basílica Nuestra Señora De La Altagracia

COMMENT:

The real challenge of Urbebox was designing the process, not just executing it: building from scratch a replicable workflow that encompassed aerial capture, photogrammetric processing, Blender modeling, and concrete casting.
